Together we can contribute to a sustainable future

At GLP, we set ourselves very high standards when it comes to protecting and supporting the communities in which we operate. As business builders and investors, we have a unique opportunity to embed sustainability across our buildings and beyond.

Our strategy is a process of constant improvement. That's why we need a bold vision, shared ambition, and a commitment to collaboration to make it work – and why we need our customers on the journey with us.

We believe operating efficiently has an important role to play in our contribution to a sustainable future. Our developments are Planet Mark certified during their construction stage, a legacy we aim to pass on to customers. As such, we are delighted to offer complimentary Planet Mark Property Certification.

What is Planet Mark Certification?

Planet Mark is a sustainability certification for every type of organisation and for real estate. Its Property Certification quantifies a building's ongoing operational carbon footprint and sets annual reduction targets to ensure continuous improvement.

The Property Certification will be fully funded by GLP and will follow the Planet Mark's unique three-step process. By committing to the two-year programme, you will receive:

- Measurement support:** Data collection spreadsheets will be provided and discussed on an initial setup call with a member of the Planet Mark Certification team. Ongoing support will be available throughout the data collection and submission process. You will receive a carbon footprint report and certificate for the building you operate in.
- Engagement support:** Free sustainability advisory services, including 1-to-1 carbon clinics, topic or geography based round tables, and specific tools or guides with sustainability tips, to help upskill and inspire your staff. Access to Planet Mark Community platform to collaborate and communicate with fellow members.
- Communication support:** Provision of the Planet Mark logo, and marketing and communication assets. This includes physical materials to display in buildings, case studies highlighted through Planet Mark social media channels and cumulative carbon reduction reports.

“ The period leading up to 2030 is considered to be the most important period for tackling the climate emergency and biodiversity breakdown”.

The Decade of Action

The period leading up to 2030 is considered to be the most important period for tackling the climate emergency and biodiversity breakdown. If we take action now, we will do much to avert these unfolding crises and have a planet that is fit for us and our future generations.

Building and construction are responsible for 39% of global carbon emissions, with operational emissions (from energy used to heat, cool and light buildings) accounting for 28%.

Together, we can create and operate buildings that future generations will recognise for pushing boundaries at this critical moment for us and the planet.

Forging a Sustainable Legacy

As the logistics industry grows, its impact on and role within local communities will too. That's why we are so committed to contributing to the communities we operate within, building meaningful, productive and sustainable relationships.

For us, corporate responsibility is, first and foremost, a very human concept. By doing good in the world, we are not only doing the right thing, but also building a sound business strategy.

That's why we have partnered with Planet Mark, to empower our stakeholders to reduce their carbon footprints, nurture and protect habitats, and improve the wellbeing of their people, whilst also achieving returns on their investments.

The Business Benefits

- By 2025, 75% of the UK workforce will be millennials, who care deeply about contributing to society and the environment.
- Organisations can increase their value immensely by focusing on sustainability, and many of the world's leading brands are doing just that. Moreover, there is a strong correlation between a company's resource efficiency and the strength of its financial performance.
- Crucially, reducing carbon means reducing energy and consumption, finding efficiencies that save money and add to your bottom line. By cutting carbon, energy, water and waste, you show that your business understands the issues and challenges of climate change and is actively mitigating its emissions.
- A well thought out sustainability strategy can reduce costs significantly, affecting operating profits by as much as 60%.

“ At GLP, we are committed to reducing carbon consumption both at an operational and at an embedded level. We are excited to be launching this new scheme with Planet Mark which will help our customers to drive down carbon emissions and encourage our customers to work more closely with GLP on the journey to net zero”.

Natali Cooper Managing Director Head of Portfolio & Asset Management & ESG – Europe.

Continuous improvement

98% of Planet Mark members achieve their targets and retain certification year-on-year. With some members certified for 10 years or more.

Next steps

Sign up for Property Certification

1. Confirm you would like to adopt complimentary Property Certification.
2. Submit readily available data and supporting evidence to Planet Mark within 12 weeks of signing up.
3. Once a complete submission is obtained, receive certification assets within 4-8 weeks.
